

Web Accessibility

Web Access for Persons with Special Needs

In today's society, information and services are increasingly being delivered through online channels. By allowing persons with disabilities to use online channels to access information and receive these services, a greater independence is achieved and barriers to service are removed.

North American governments have enacted laws in order to identify and remove barriers for people with disabilities and this access now includes websites. The Americans with Disabilities Act and the Ontario Disabilities Act of 2001 are examples of these laws which also cover actions of municipal governments.

Enabling websites to be accessible by people with special needs requires certain modifications to web content and layout.

Imex Systems Inc. is one of the few companies in North America with extensive experience in the conversion of existing websites in order to make them comply with these Accessibility Acts and meet W3C/WAI guidelines.

Our services for Web Accessibility include:

- Consulting on Accessibility standards
- Evaluation of existing sites to determine barriers to access
- Redesign and development of websites and applications to comply with accessibility standards
- Conversion of file standards for accessibility eg. PDF to HTML or Tagged PDF

Our proprietary methodology allows us to effectively develop and/or convert websites to comply with accessibility standards under tight timelines with validated 100% accuracy and delivered within affordable budgets.

KEY FEATURES

Full WCAG Implementation

Proven Methodology

**Expert Knowledge of
Accessibility Techniques**

**Track Record of many
Successful Projects**
