

iPay Payment Management System

iPay is a versatile payment management system that helps municipalities to collect all payments through a single integrated system. It handles both in-person payments through a cashier and online payments through credit cards and debit cards.

iPay provides integration with backend applications and eliminates the need for manual posting of transactions to each of the departmental applications.

iPay improves the speed of processing of payments at the cashier reducing the line-ups at the counters. It automates the municipal payment processing to a large degree and improves the staff productivity while providing 24 x 7 convenience to citizens.
